**Notes:**

Arrived on site at 11:30 a.m. Wind west at 35 mph, and temperature was 34 degrees F. The area of impact is in a field located west of the oil pad. Inspection of the site and walking of the field showed the field had been cultivated, planted with flax and harvested. No visible signs of stained soil or bare areas of vegetation in the field. Due to rain the past week, water was puddled in some areas of the field along the pad, but no visible sheen was seen. Check to see where waste was disposed of. No additional follow-up needed for this site.
